CORPORATE PORTFOLIO EXPANSION

Global Real Estate Portfolio Diversification Strategy

A descriptive, data-driven framework leveraging property listing statistics across 147k global listings to identify high-yield investment zones.

Exploratory Data Analysis (EDA)

Mohamed Yusuf Ali Alshakhoori - DSB-1

01. Portfolio Risk & Objectives

Analyzing localized inflation and evaluating structural constraints to build a robust asset acquisition framework.

⚠ The Problem: Domestic Yield Stagnation

Domestic Market Challenges

Private equity real estate firms currently experience an average of **15% stagnation in domestic portfolio yields**. This structural decline is heavily driven by localized inflation, property valuation bubbles, and tightening domestic regulatory policy structures.

The Capital Erosion Threat

Maintaining high capital concentration solely in localized asset classes poses an anticipated **$2.4M reduction in annual revenue growth**. This vulnerability necessitates systematic expansion into high-yielding, resilient global micro-markets.

Analytical Framework Objectives

Market Selection

Identify the five most cost-effective countries offering optimal entry pricing ($USD/sqm) for contemporary properties.

Asset Optimization

Map out optimal property profiles relative to bedroom and bathroom scaling dynamics.

Volume Evaluation

Determine which target countries contain a sufficient volume to facilitate large-scale capital deployment without inflating localized prices

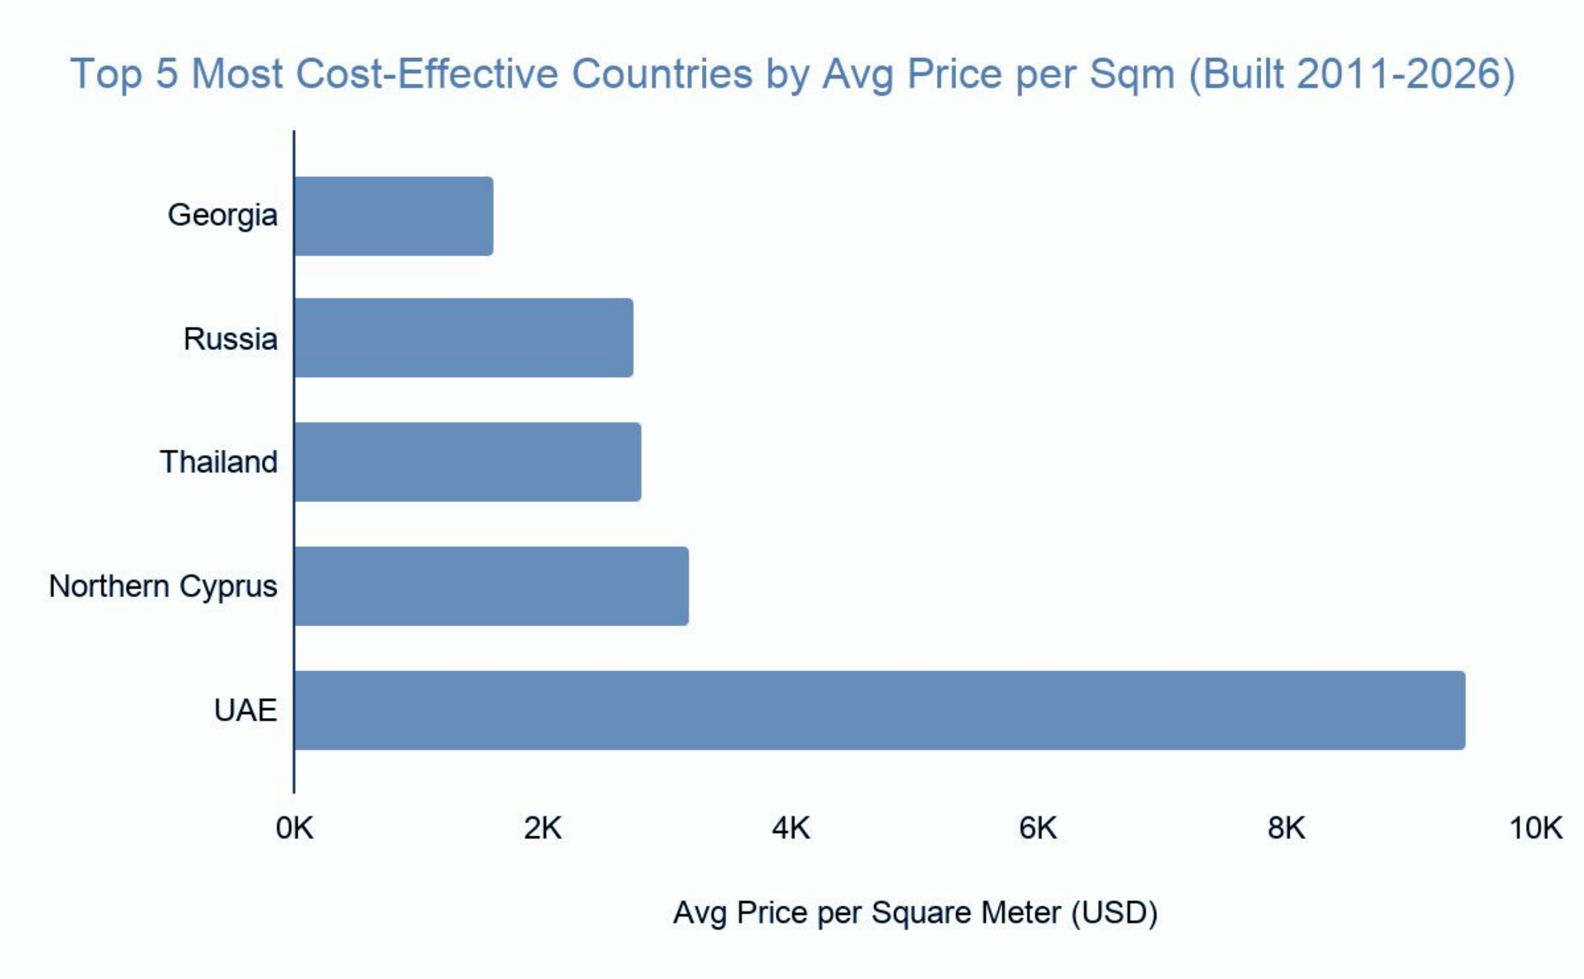
Capital Allocation

Determine exact geographic target cities that yield the absolute maximum usable space within a $500K to $1.5M budget.

02. Market Sourcing & Cost Efficiency

Evaluating raw cost data per unit area to isolate premier investment geographies built between 2011 and 2026.

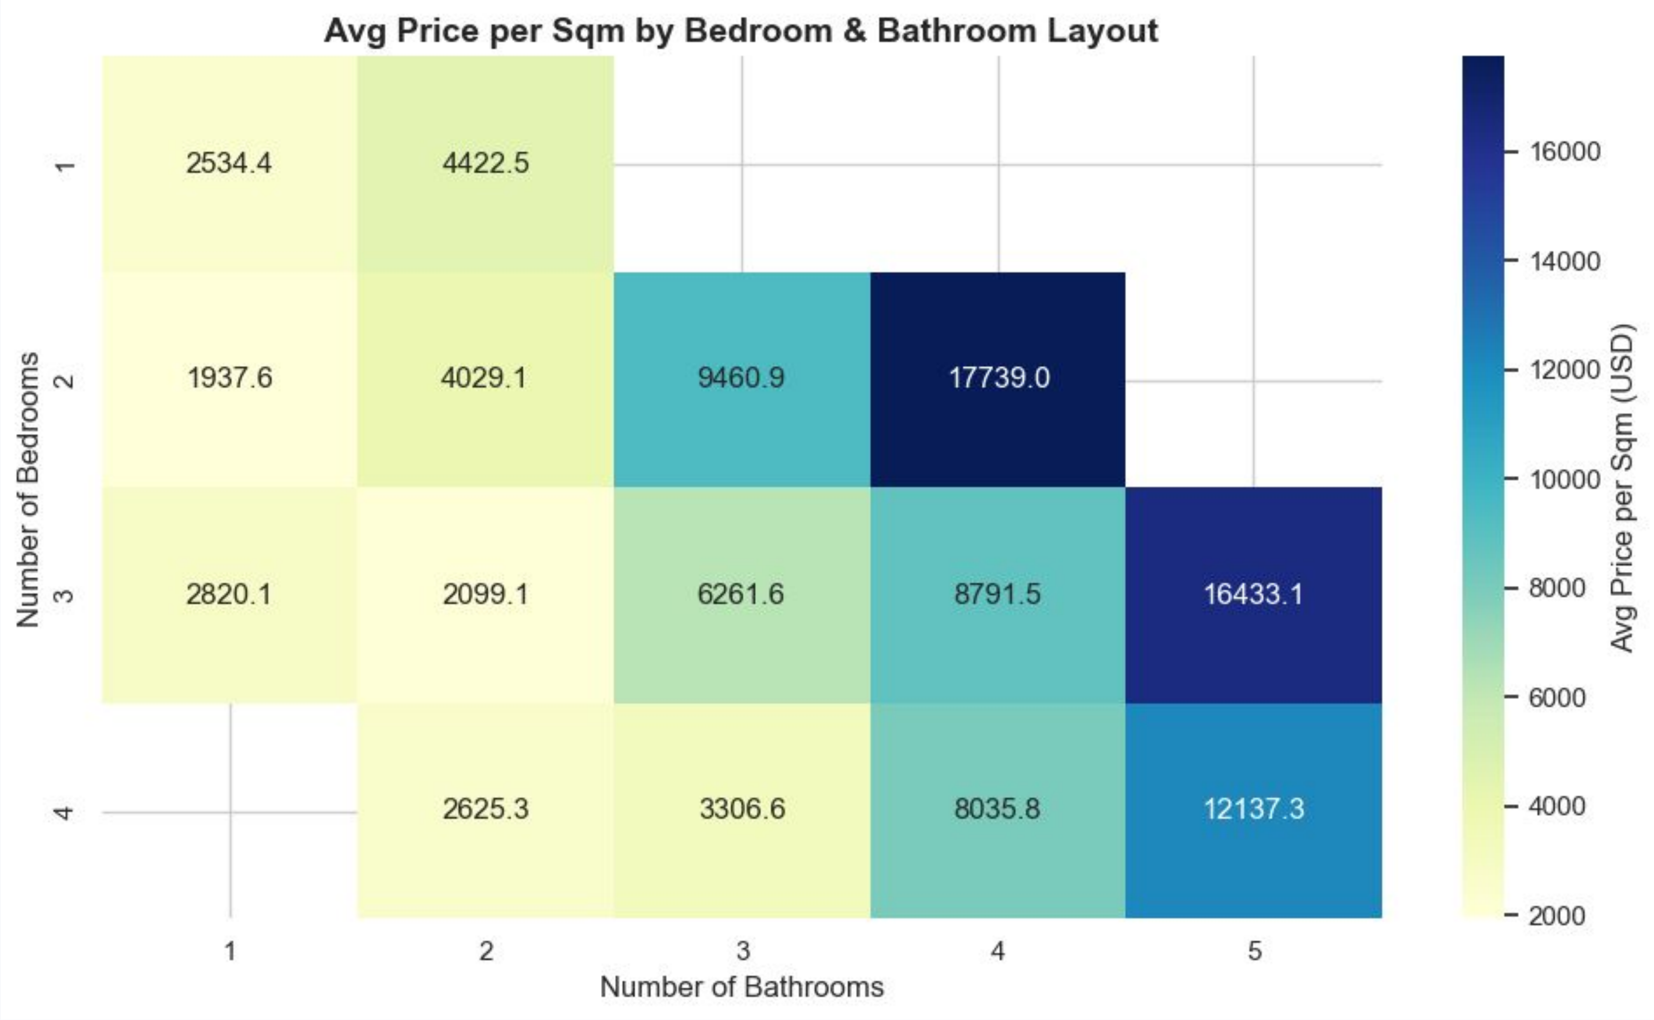
Top 5 Most Cost-Effective Countries



Core Spatial Takeaway

Georgia is the absolute entry champion at **$1.6k/sqm**, followed closely by Russia and Thailand. The **UAE** remains a luxury outlier requiring massive premiums.

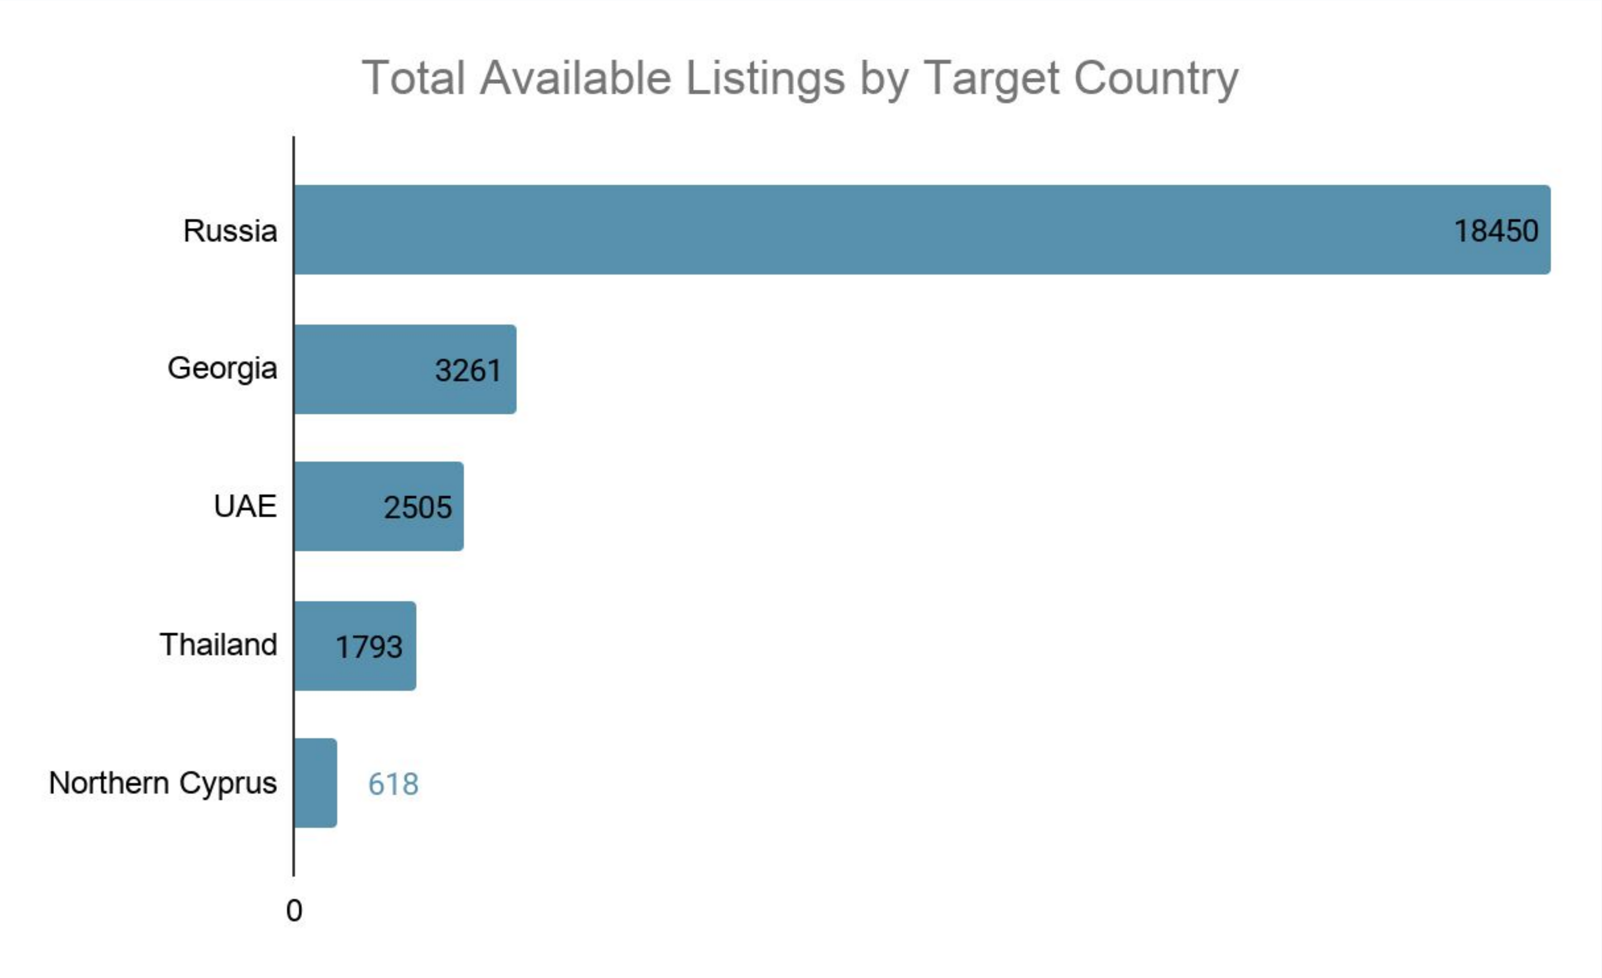
Asset Profile Cost Heatmap (per Sqm)



Profile Target Zone

To optimize spatial ROI, target **2 Bed / 1 Bath** or **3 Bed / 2 Bath** layouts. Avoid large bedroom/bathroom configs (>5 bedrooms/4 bathrooms) due to extreme premium hikes.

Market Capacity & Active Supply Volume



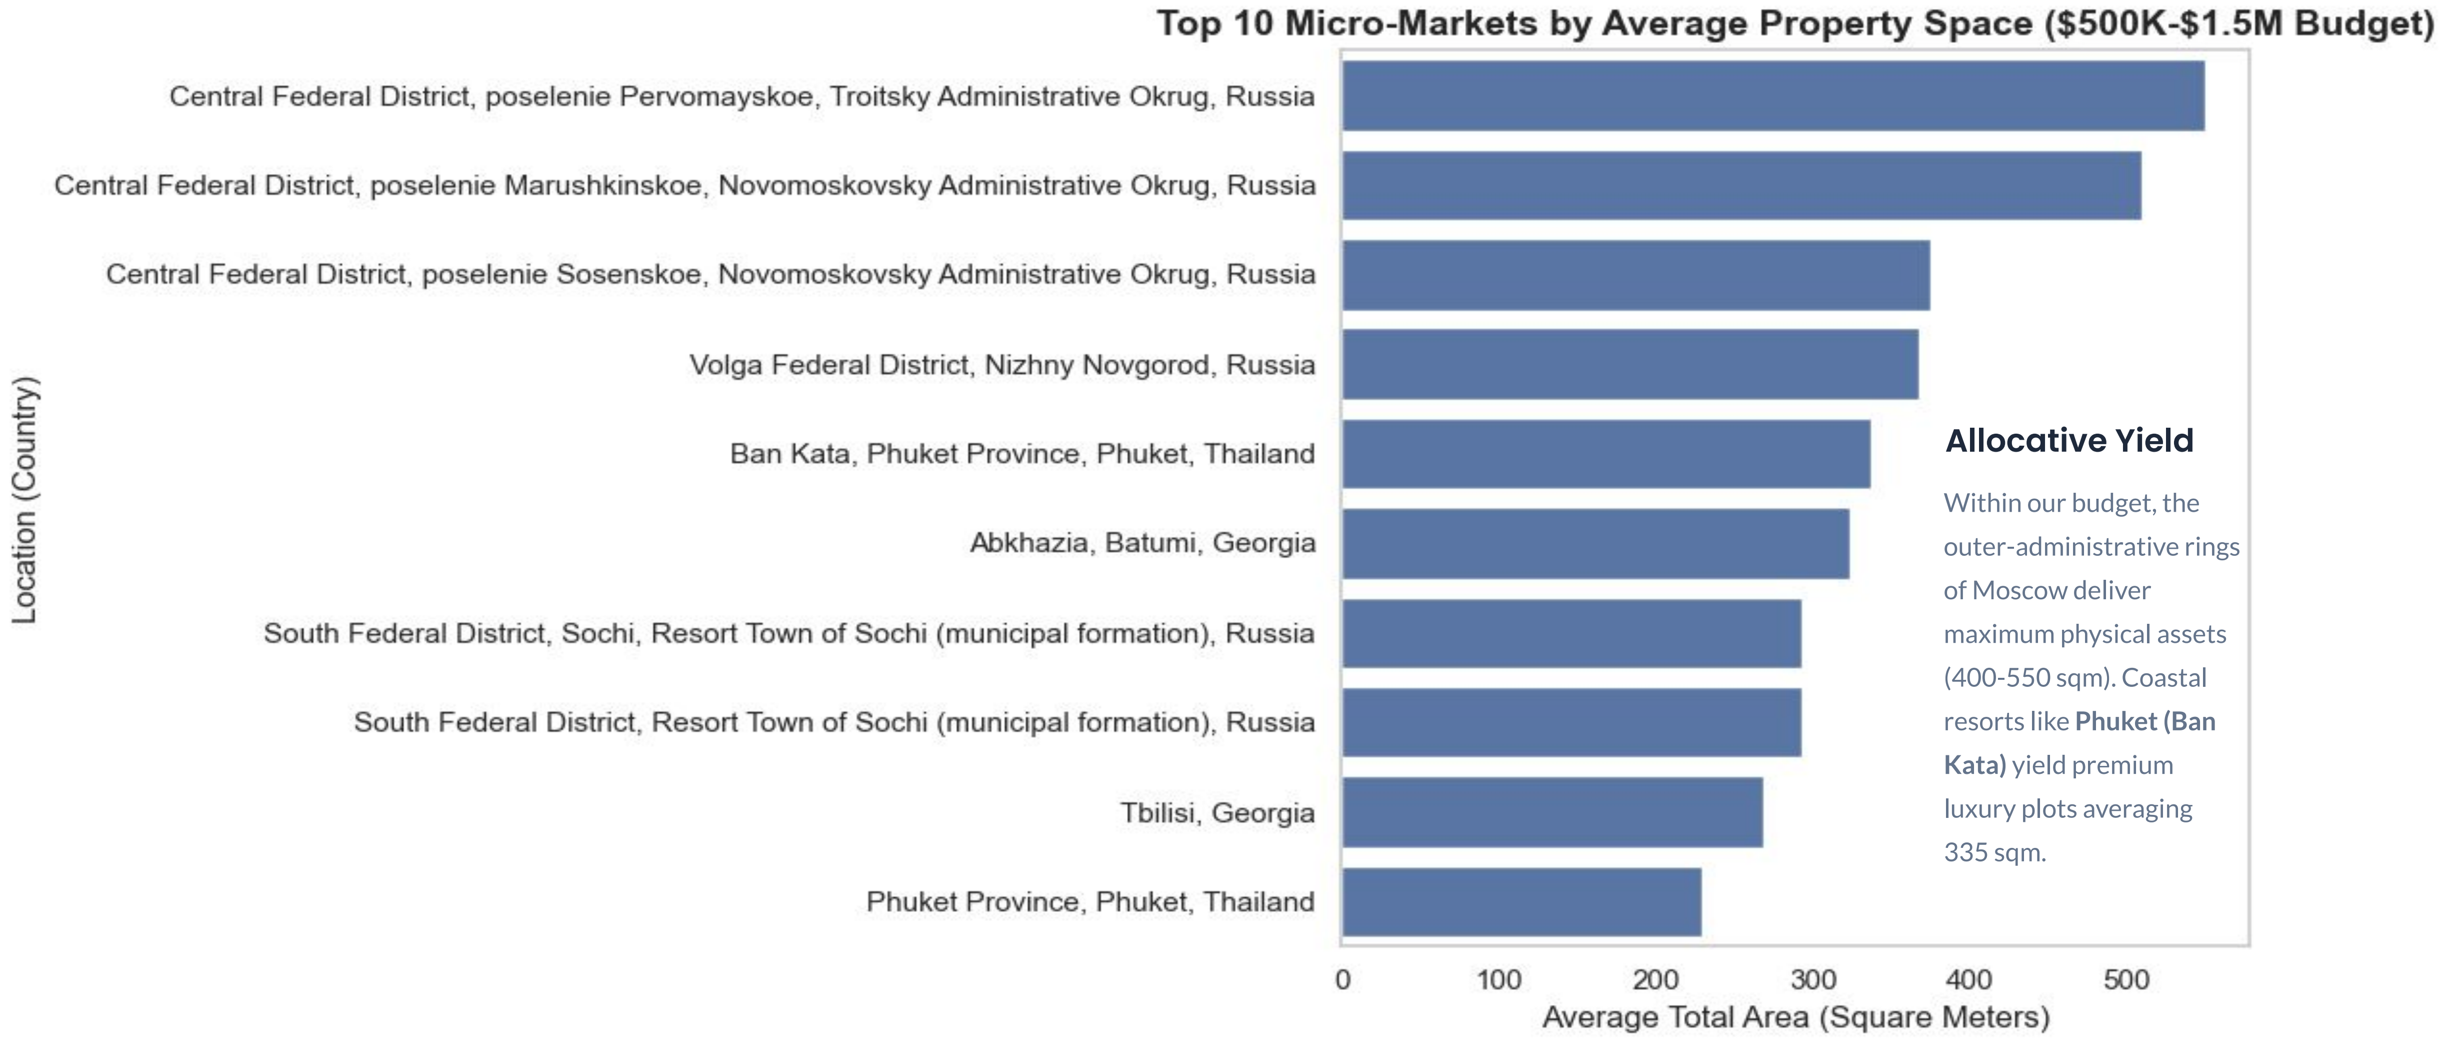
Deployment Feasibility

Russia offers unmatched volume, minimizing transaction slippage. **Northern Cyprus** has restricted inventory, exposing high-capital trades to local inflation.

03. Asset Allocation Playbook

Allocating capital to specific geographic micro-markets to maximize aggregate square footage.

Space Yields: $500K - $1.5M Budget



Allocative Yield

Within our budget, the outer-administrative rings of Moscow deliver maximum physical assets (400-550 sqm). Coastal resorts like **Phuket (Ban Kata)** yield premium luxury plots averaging 335 sqm.

Tactical Investment Playbook

Diversify Capital into Georgia & Russia

Combine high listing liquidity in Russia with record-low entry pricing in Georgia ($1.6k/sqm) to balance transactional scale with optimal capitalization rates.

Target Moderate-Density Layouts

Standardize acquisitions to 2-3 bedroom configurations with 1-2 bathrooms, completely avoiding highly inefficient luxury layouts with >5 bedrooms due to extreme cost inflation.

Focus on High-Yielding Micro-Markets

Direct the allocated $500K to $1.5M budget toward specific suburban pockets like Pervomayskoe (Russia), Batumi (Georgia), and Ban Kata (Thailand) to secure maximum physical footprints.

Thank you!
